

Donell Project – Detailed view (v1)

By Bill Weis

Requirements:

1. Donell has a **Serta MotionPerfect II** bed that she wanted to control via voice

Solution – High Level:

1. We noticed on the cover of the owners' manual that it said "Powered by ergomotion", so rather than having to design a solution from scratch, we used the ergomotion wifi dongle to achieve voice control over the bed.

Details of the Solution

1 – Voice Control her Serta MotionPerfect II bed – Donell has a Serta MotionPerfect II bed with a 2.4ghz wireless remote. Donell's sister emailed a picture of the owner's manual and we noticed in the lower right of that manual that it said "Powered by ergomotion". We had some discussions with ergomotion a few years ago so we were aware of their solution, so we purchased their WiFi dongle solution and sent it to the customer. They struggled a bit with setup, so we created a installation video which helped clarify the areas they struggled with.
