

# **Kyle Poole Project – Detailed view (v1)**

By Bill Weis

Requirements:

1. Be able to voice control his bed (Invacare Full-Electric 1115290 pendant)

Solution – High Level:

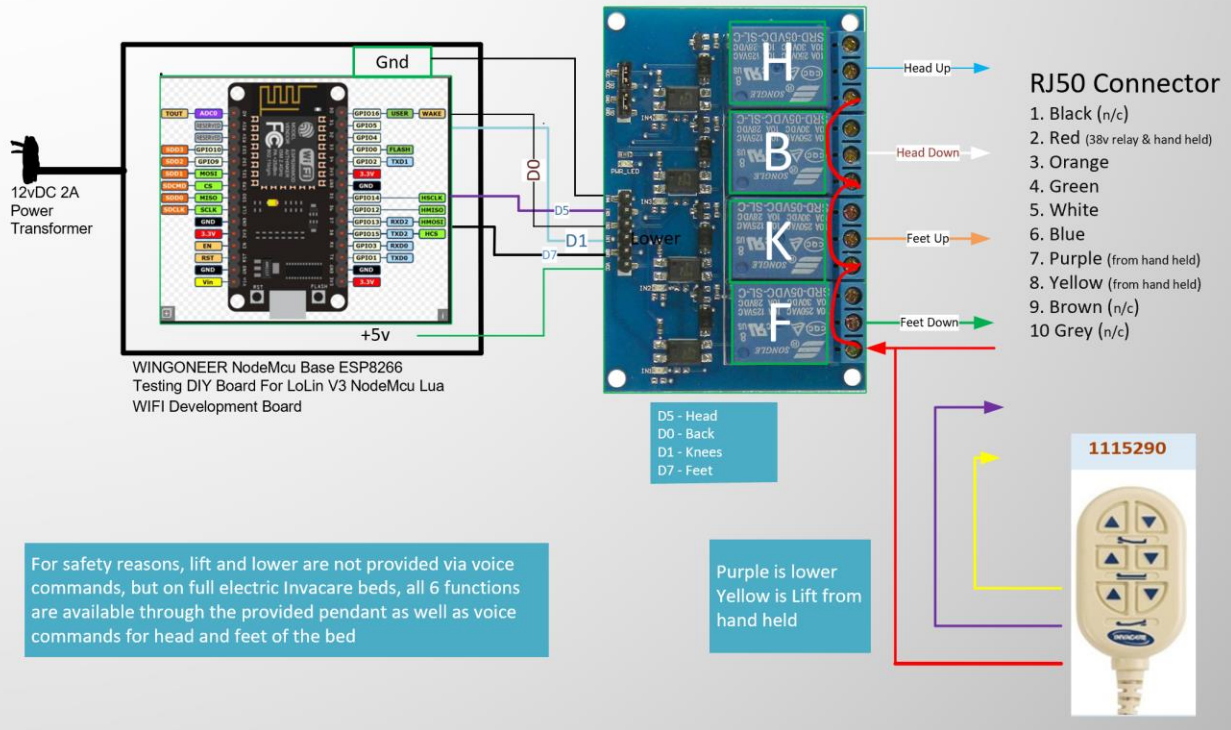

1. Installed a custom voice activated bed controller to allow Kyle to control his full electric Invacare bed using voice commands.

## **1. Be able to voice control his bed (Invacare Full-Electric 1115290 pendant)**

Kyle's spinal injury has left him with limited control over his hands. We designed a voice activated bed controller which will give Kyle the ability to control his adjustable bed with a variety of commands. All commands run for a predetermined length of time and Kyle can choose the command that best suits his needs. The head of the bed can be raised/lowered in 1,2,3,4,5 &6 second intervals. It will require multiple commands to go from a flat position to a full up sitting position, but this approach is done for safety reasons. The foot end of the bed can be raised/lowered in 3, 4 or 5 second intervals. A nice feature of the Invacare bed design allows for us to provide a dual control environment. Both voice-activated control as well as adjustments to the bed via the pendant are possible. This is handy in cases where WiFi might be disrupted or if a caregiver chooses to adjust the bed manually. Also note that for safety reasons, we do not provide a voice solution for the bed Hi Lo feature, so still having the ability to use a hand remote without the need to swap cables is very handy.

Here is a schematic of the bed controller design
