

Brett – Wounded Warrior
Detailed view by Bill Weis

Requirements:

1. Be able to control the lamps next to his bed by voice
2. He needed an adjustable bed
3. Standardize on Google Home for home automation

Solution – High Level:

1. We provided two Wemo switches which gave Brett the ability to voice control his bedside lamps
2. We reached out to Reverie and told them about Brett and they donated a new adjustable base that was voice activated.
3. Brett wanted to view the various cameras he has around his house on a single device.

Details of the Solution

1 – Voice control bedside lamps – Brett has two bedside lamps he wanted to control using voice commands. We provided two Wemo Smart Mini plugs

2 – Brett needed an adjustable bed that was voice enabled – Because of Brett’s injuries, he spends much time in bed including meals. For him to sit up and eat comfortably, pillows were stacked behind him, however they did not always stay in place. A voice enabled adjustable bed was the best solution for Brett. Our policy at Limited Mobility Solutions is to fill unmet needs whereby in typical cases someone asks us to add voice control to an existing adjustable bed. Brett did not have an adjustable bed for us to work with, and since companies like Reverie have voice solutions for their adjustable beds, we decided to contact Reverie and we shared Brett’s story with them. We were very pleasantly surprised when they offered to provide Brett with a great solution that worked with his existing mattress. How incredibly generous of Reverie to help this wounded warrior.

3 - Brett wanted to view the various cameras he has around his house on a single device – We contacted Google and they generously donated a Google Nest Hub Max to Brett so he could view activity on his cameras including doors as well as a camera he uses to interact with his kids. We also shipped a Google (donated) Pixel3 phone to Brett which he can use to configure his home automation devices. He likes the phone so much that he is considering moving to the Pixel 3 phone for his cellular needs as well. Brett will use the Google Nest Hub Max to also control his voice activated Reverie bed as well as the two WeMo switches for his bedside lamps.
