

Joseph S – Duchenne Muscular Dystrophy
Detailed view by Bill Weis

Requirements:

1. Joseph has a Joerns Easy Care 100 and wanted a better way to control his bed manually

Solution – High Level:

1. We contacted Product Design and Development Corp and had them create a custom low tactile pendant

Details of the Solution

1 – Easier Manual control of the Adjustable bed – Joseph has Duchenne Muscular Dystrophy and has been struggling to work the hand pendant for this Joerns Easy Care 100 bed. He is not ready for a voice controller for his bed and was hoping to find a pendant that would work better for him. We have worked with a company called Product Design and Development Corp in the past who can build a low tactile pendant with raised buttons. The pendant below is the low tactile device that seems to work very well for Joseph.
