

Thomas Project – Detailed view (v1)

By Bill Weis

Thomas - ALS

Requirements:

1. Thomas has a Tempur Pedic Ergo bed that he wanted to control via voice

Solution – High Level:

1. Before the bed was purchased, we confirmed with Ergomotion that their Wi-Fi dongle would be compatible with the Tempur Pedic Ergo bed.

Details of the Solution

1 - Voice Control his new Tempur Pedic Ergo Bed – Thomas has a new Tempur Pedic Ergo bed and wanted to control it by voice. Fortunately, the Ergomotion base for this bed has a supported WiFi Dongle which we installed and configured. It is great to see commercially available voice solutions for beds as the need is significant. There are many with limited mobility who wish to have control over their own comfort, and the Ergomotion solution provides that.
